

Installing a Point-of-Entry (POE) Filter

1. Make sure your MoCA network is functioning properly (e.g., can you see the Discovery Bar or connect to TiVo service on your MoCA-enabled TiVo box?).
2. Install the POE filter where your cable signal enters your home, as shown below. In some cases, the point of entry is in a junction box (often in a closet).

3. Check to make sure your MoCA network is still functioning properly. If it's not, the POE filter is likely installed in the wrong location. Be sure to install the filter as close as possible to the point where the cable signal enters your home (not after it splits into different rooms).
