

Installing a MoCA®/Point-of-Entry (POE) Filter

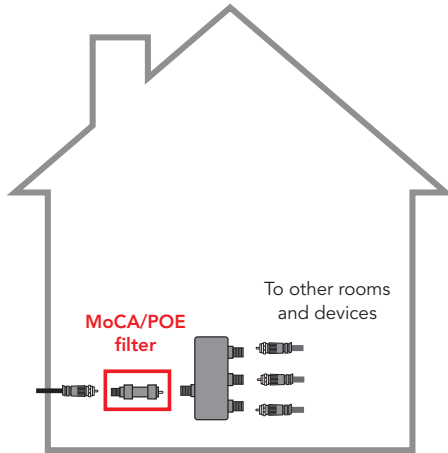

Install the MoCA/POE filter as close as possible to the cable/OTA source, before the signal reaches a splitter.

For cable TV: Install the filter where the coaxial cable from your cable provider enters your home.

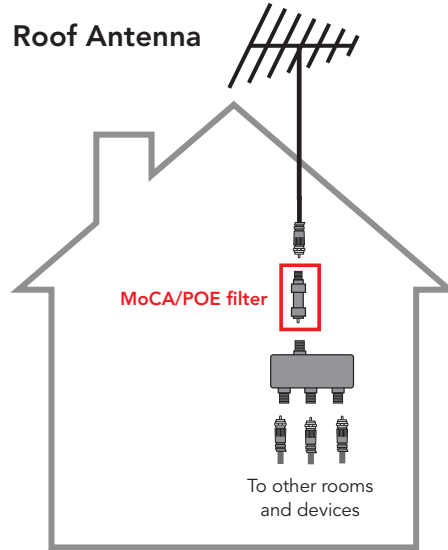

For antenna: Install the filter as close as possible to the antenna, or at the antenna itself.

Choose the setup that best matches your home:

Cable TV

Roof Antenna

Tabletop Antenna
